During Wynter's workshop she traces the origin of animal communication back to ancient African tradition, showing you that talking with the animals is not a new concept, but is based on ancient knowledge. Wynter will lead you through specific exercises and meditations to help you still your mind, enabling you to start understanding the subtle language of the animals. You will have the opportunity of working directly with the animals at the venue. This workshop is designed for beginners as well as those who have attended past workshops with Wynter and want to brush up on their AC skills.

Day one will cover how to still your mind and be receptive to what the animals tell you. How to send messages to the animals in a way that they will understand. The day will be filled with magical meditations and wonderful conversations with our animal friends. Wear comfortable clothes so that you can be completely relaxed.

Day two will cover more animal magic, where you learn how to communicate with animals over any distance. We will also be exploring the realm of communication with animals who have crossed over. Wynter invites you to bring photographs of your animal friends, both past and present
